

A B S T R A C T

A SYSTEM AND A METHOD FOR SELECTING IN A TERMINAL AN
ARCHITECTURE DEDICATED TO A COMMUNICATIONS NETWORK

5

System for selecting an architecture (15, 16, 17)
dedicated to a communications network (40, 41, 42, 50,
51, 52) in a terminal (10) including a user interface
(11). According to the invention, the connection to the
10 communications network (40, 41, 42, 50, 51, 52) being set
up by means of a PDP context link via a mobile network,
the system comprises selection means (18) adapted to
control access to a dedicated architecture manager (19)
integrated into the terminal (10) to manage an
15 architecture (15, 16, 17) dedicated to a communications
network (40, 41, 42, 50, 51, 52) and to process
simultaneously the operation of the dedicated
architectures (15, 16, 17) of the terminal (10) connected
to a plurality of the communications networks (40, 41,
20 42, 50, 51, 52). Application to selecting access to a
communications network (40, 41, 42, 50, 51, 52) of a set
of communications networks each offering a set of
services via a dedicated architecture (15, 16, 17)
integrated into the terminal (10) which is connected to a
25 public mobile network to which the user is a subscriber.
